

Anyone can do post-publication peer review.

Anyone can do forensic metascience.

Anyone can sleuth.

However, investigating the integrity of the published scientific literature often requires domain-specific knowledge that not everyone will have. This project is a collection of guides written by publication integrity experts to distribute this domain-specific knowledge so that others can participate in post-publication peer review.

COSIG currently hosts 8 guides and was last updated on 7 February 2025.

Except where otherwise indicated, all material in COSIG is available under a [CC BY-NC-SA 4.0 license](#). That means that you are free to distribute, remix, adapt, and build upon the material in any medium or format for noncommercial purposes only, and only so long as COSIG is properly cited. If you remix, adapt, or build upon the material, you must license the modified material under identical terms.

Table of contents

General guides

- PubPeer commenting - best practices
- Extracting vector graphics from a PDF
- The vertical line test
- Software for image forensics

Biology and medicine

- Misidentified and non-verifiable cell lines

Materials science and engineering

- Energy-dispersive X-ray spectroscopy
- X-ray diffraction patterns - Scherrer's equation

Mathematics and statistics

- Standard deviation versus standard error
